PDF tricks

This page list some hints related to processing of PDF files.

Counting pages in multiple PDF documents.

This one-liner does the trick using `pdftotool` tool:

```
for i in *.pdf; do pdftotool $i | grep Pages ; done
```

To display file names along number of pages use this command:

```
for i in *.pdf; do (s=`pdftotool $i | grep Pages`; echo $s $i) ; done
```

To find the total number of pages one can use `awk`:

```
for i in *.pdf; do pdftotool $i | grep Pages ; done | awk 'BEGIN {s=0} {s=s+$2} END {print s}'
```
